CESTO

Personnel work basket that may occasionally be used with machines fitted with material-handling forks whose characteristics are suitable for coupling to the basket. The structure is made of aluminium alloy, with fully non-slip access and protective mesh in expanded polyethylene. The rear section, which has no structural function and only protects against the risk of falling, is divided into two easily removable parts that turn the basket into a cube for easier transport.

Reference standards:

Decree-Law 50/2005 (Portugal) on health and safety at work, Machinery Directive 98/37 / EC EN 280 Mobile elevating work platforms
